A three-dimensional forensic facial reconstruction of Karin Månsdotter will be created on a 3D-printed replica of the original skull. The completed reconstruction will be cast in skin-pigmented silicone and fitted with real human hair to achieve a highly realistic appearance.

Price for a facial reconstruction of Karin Månsdotter: **14 999 Euro**

Included in this price is photographic documentation, consisting of approximately 25 step-by-step images as well as documentation of the work throughout the course of the project. The cost of delivery is also included in the price.

Please note that clothing, jewellery, and any other accessories are not included in the quoted price.

To create a facial reconstruction, a scan of the original skull is required to generate a digital 3D model. This model serves as the basis to produce a 3D-printed replica, which is then used in the reconstruction process. The costs associated with scanning, digital modelling, and 3D printing are not included in this quotation.
The facial reconstruction work can commence once the skull replica has been produced and the osteological analyses and any DNA examinations have been completed. Provided these prerequisites are met, the reconstruction can be completed and delivered during the first half of 2028.

This quotation is valid for 12 months from the date stated above.
